

From community to enterprise:

Canada Life and Red Hat Ansible Automation Platform

Hani Mousa

AVP - Engineering
Canada Life

Vaishak Nair

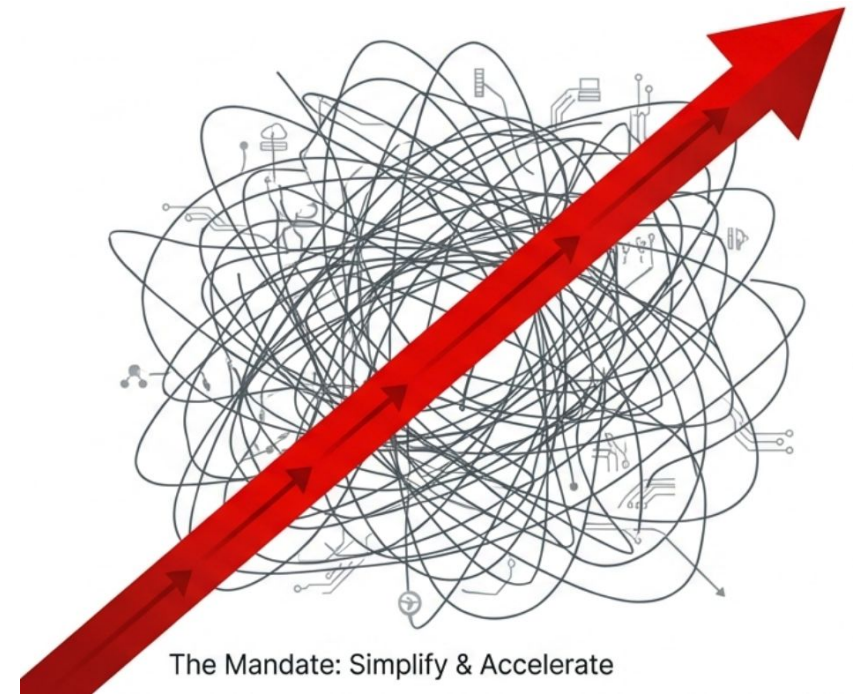

Director - Infrastructure Automation & SRE
Canada Life

The Enterprise Automation mandate

The Ambition: Automate everything across the infrastructure.

The Reality : Operating within strict enterprise constraints.

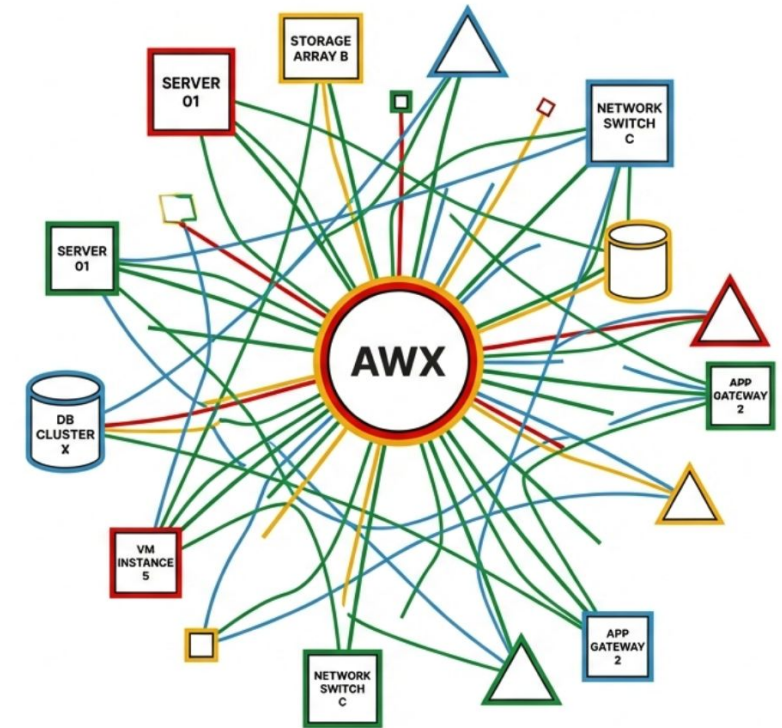

The initial toolset : Relying on community supported tools to get started.

The initial spark of Infrastructure as Code

AWX provided the **foundational automation capability**.

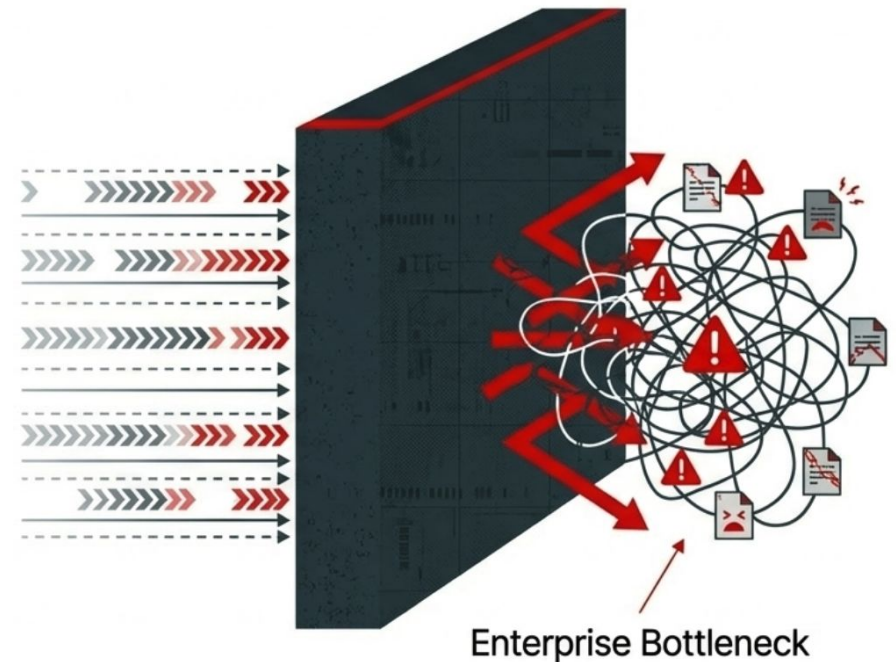

Engineering teams gained early confidence in building the foundations and saw the power of automation using **Ansible**.

Hitting the Enterprise Wall

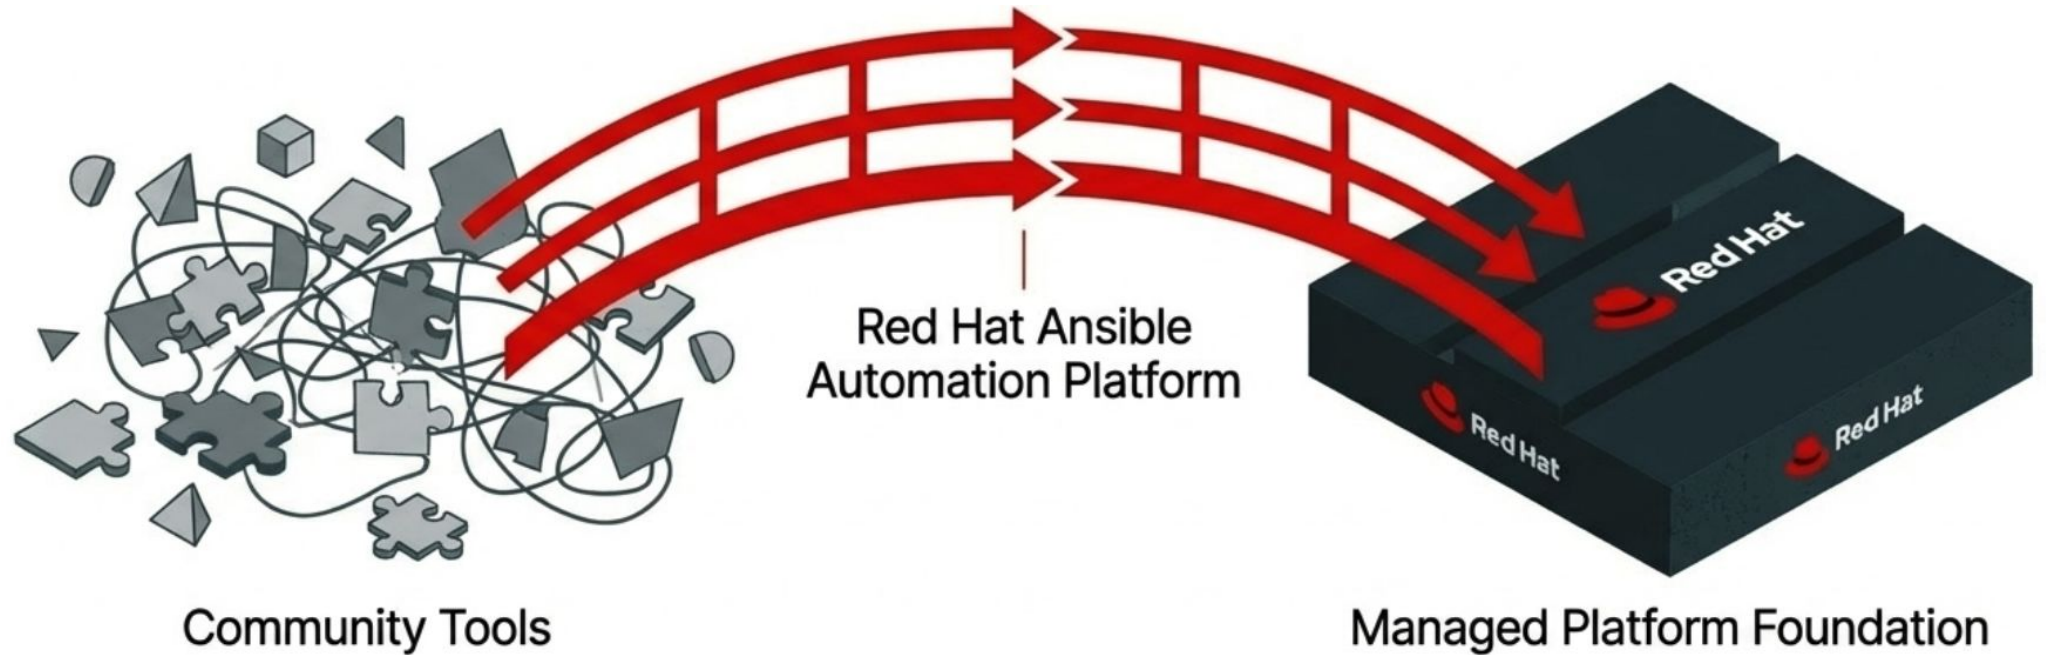

Friction points with community supported tools

- Navigating strict compliance requirements.
- Increasing operational overhead.
- Managing scalability roadblocks.

Transitioning to a Managed Automation Engine

Migration to **Red Hat Ansible Automation Platform (AAP)**, as a **managed offering** ;provided the strategic automation approach needed to **unlock engineering capacity**.

Unlocking Key Platform Capabilities

Enterprise Support

- Managed Application
- Enhanced Security
- RedHat Managed Updates

Operational Efficiency

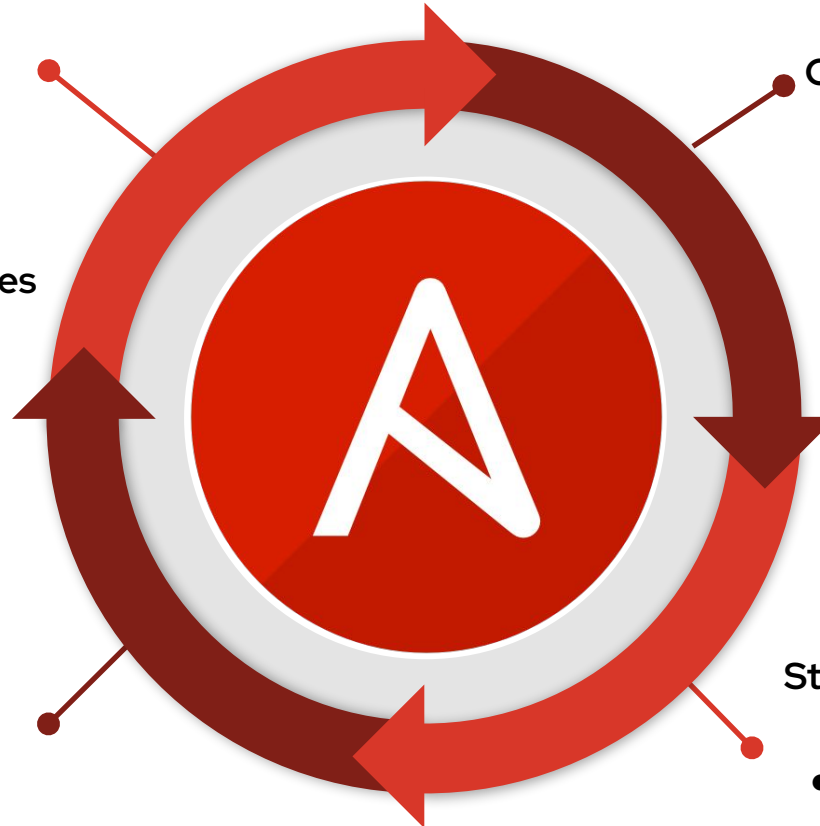

- Reduce Operational Overhead
- Increase Automation Adoption
- Reduce MTTR

Innovation

- Reduce Toil
- Self healing & AIOps
- Accelerating Modernization

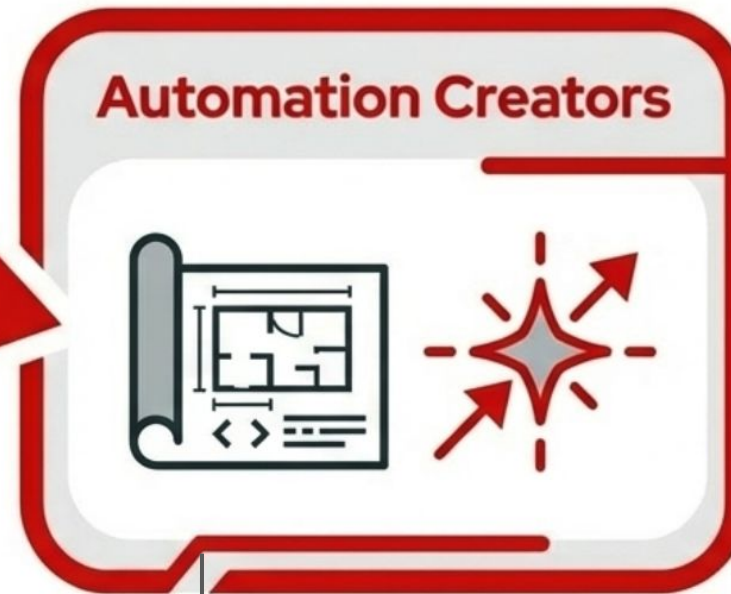

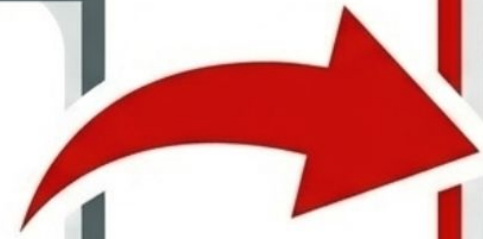

Standardization

- Consistent Automation
- Certified content collections
- Support across Hybrid Environments

A fundamental shift in team mindset

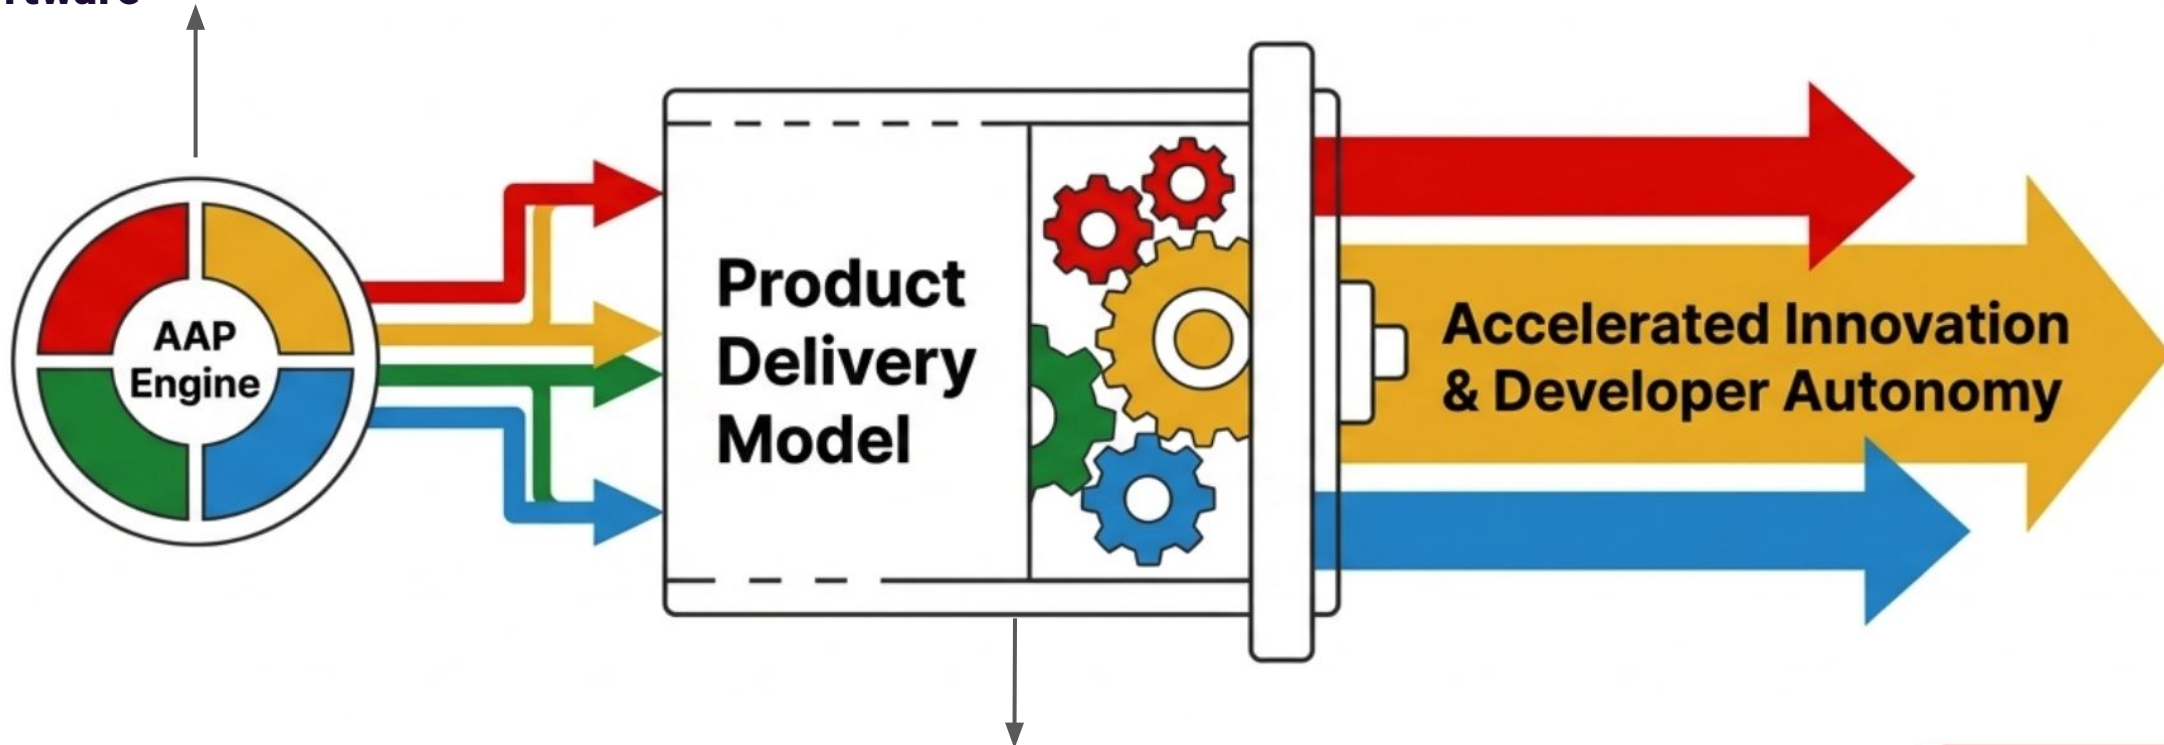

Free up platform engineers from tedious maintenance tasks.

Empowering engineering teams to start accelerating enterprise innovation.

Delivering Automation as a Product

Treating internal automation with
the rigor of customer facing
software

**Deliver standardized, scalable automation
capabilities to business units that need them**

The next frontier is AIOps

- Engineering capacity unlocked
- Scalable product model

**Foundational
Automation**

- Build a strong AIOps foundation
- Proactive Incident Response
- Self-Healing infrastructure

Moving to - Event Driven Ansible (EDA)

Traditional Automation

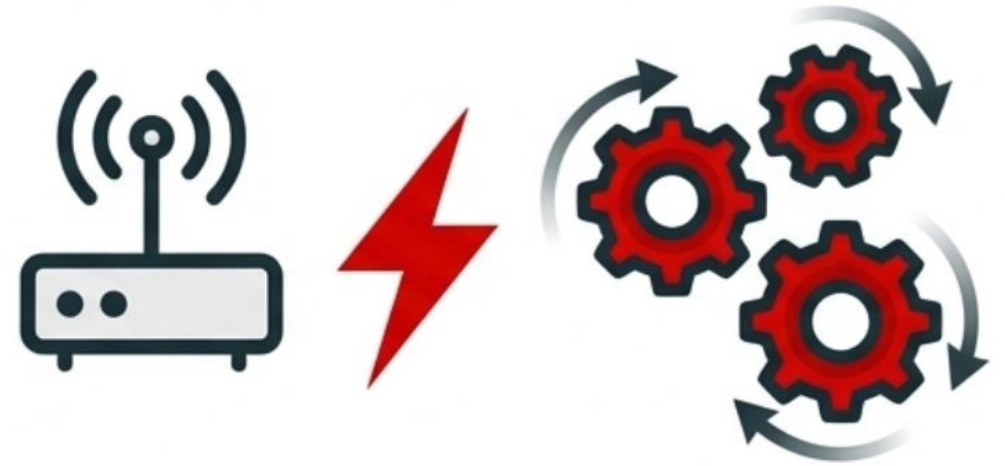

(Manual)

**Schedules, manual triggers
& human dependency**

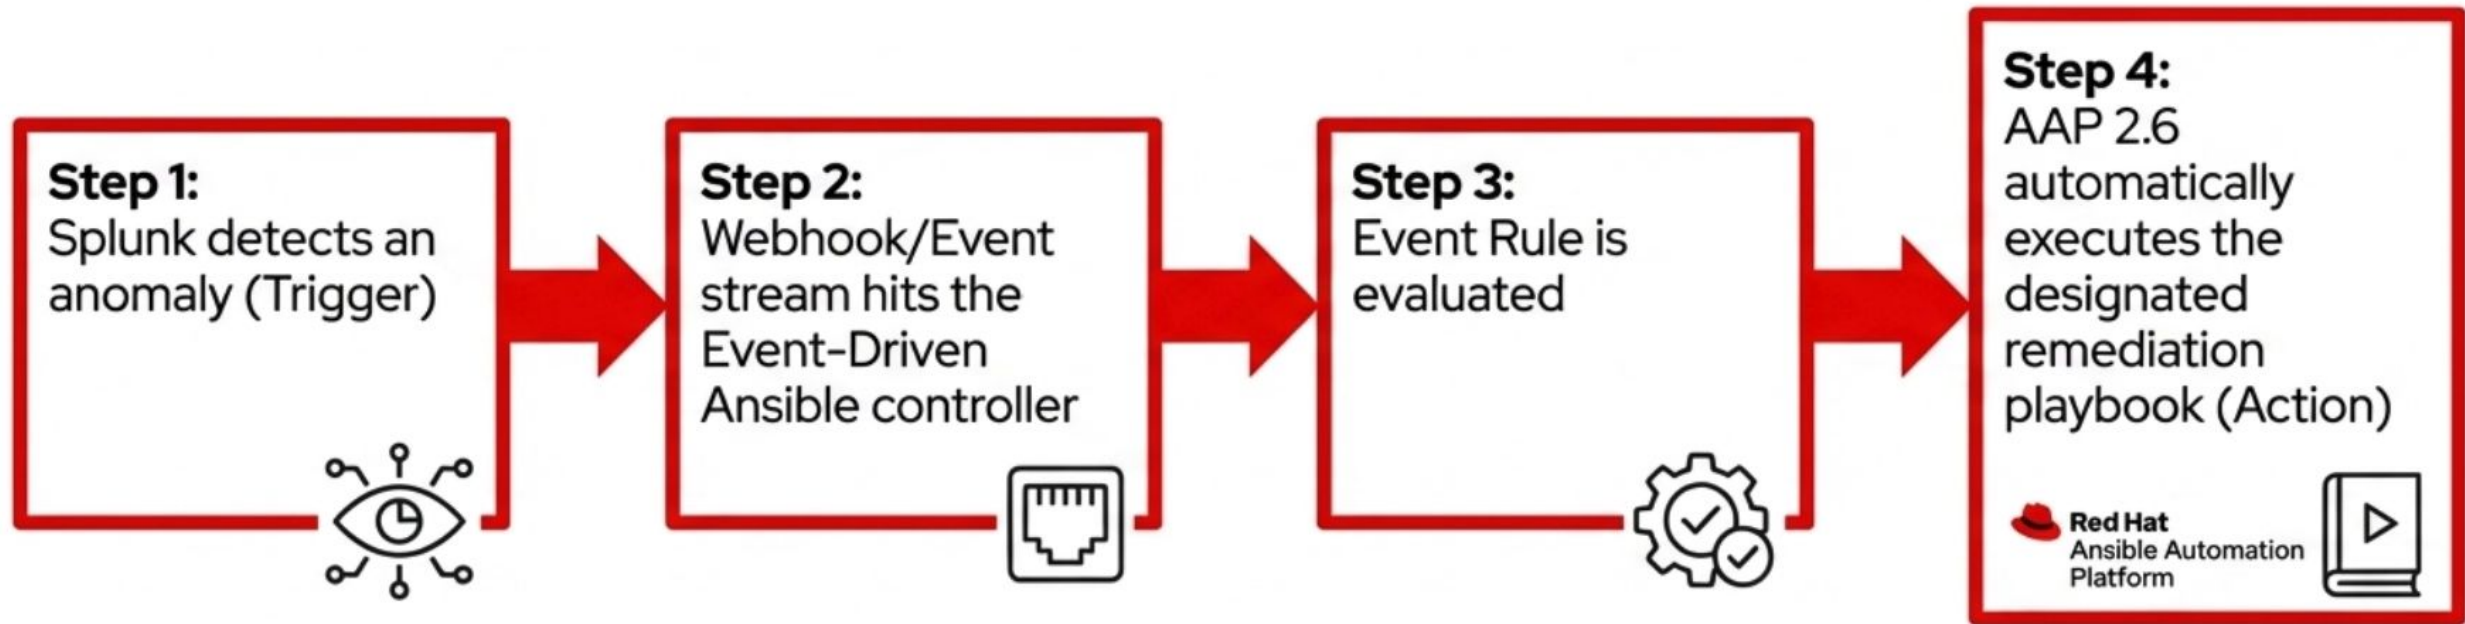

Event Driven Ansible

(Proactive)

**Instant, machine triggered
& proactive response**

Anatomy of the EDA Configuration

- **Reduction in Mean Time to Resolution**
- **Elimination of manual pager alerts for known issues**

Enterprise wide automation maturity

- **Compliant**

- Natively meeting enterprise compliance requirements.

- **Scalable**

- Build on a managed Red Hat foundation.

- **Product Driven**

- Accelerating innovation through a product delivery model.

- **Event Driven**

- Supporting AIOps with proactive incident response.

Your blueprint for the enterprise

1.
 - **Calculate the true cost of community tools:** factor in the drain on engineering capacity and compliance risks.

2.
 - **Shift the culture:** adopt a product delivery model to transition teams from platform maintainers to automation creators.

3.
 - **Build a strong culture of innovation:** leverage advanced capabilities and features to accelerate modernization.
